

GOOD IDEAS MICROSOFT SECURE SCORE

Enable critical security protections in minutes.

Microsoft Secure Score¹ shows how secure you are and how to improve fast. It measures how well you're using the security tools you already have. A high score means you're protected. A low score means you've got work to do. Secure Score gives you a prioritized to do list.

IT is complicated. You don't have to be an expert to ask good questions. Good questions cut through the noise, save time, and get better results. Start here.

Ask your IT expert:

☐ Are we blocking logins from countries where we don't operate?

If your business is U.S.-only, logins from other countries are usually a red flag.

☐ Do we prevent users from checking "Keep me logged in"?

It's better to limit the amount of time a hacked session can stay logged in.

☐ Is MFA² enforced automatically for all accounts?

Microsoft reports MFA makes accounts 99.9% less likely to be compromised.

☐ Are we using email quarantine effectively?

Quarantine lets users preview suspicious emails safely before they hit inboxes.³

☐ Are Safe Links and Safe Attachments turned on?

These features scan links and attachments in real time to block threats.⁴
